                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      transplant rejection
(laim 10; page 36; 41pp; English.
The present sequence is an immunomodulatory peptide, which
comprises a class HiA-B alpha-1 domain sequence. It can be used
in a pharmaceutical composition together with a subtherapeutic dose
of an immunosuppressant, to extend the period of acceptance of a
transplant from a major histocompatibility complex (MHC) unmatched
donor, i.e. to inhibit transplant rejection. It can also be used in
the treatment of autoimmune diseases.
Peptides using the D-form amino acids are more effective
immunomodulators than their diastereomers or enantiomers.
  Peptide #4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Location/Qualifiers

The present sequence is an immunomodulatory peptide, which comprises a Class I HIA-B alpha-1 domain sequence. It can be used comprises a Class I HIA-B alpha-1 domain sequence. It can be used in a pharmaceutical composition together with a subtherapeutic dose of an immunosuppressant, to extend the period of acceptance of a transplant from a major histocompatibility complex (MHC) unmatched donor, i.e. to inhibit transplant rejection. It can also be used in the treatment of autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel immunomodulatory peptide-type compound - useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 10; Page 36; 41pp; English.

The present sequence is an immunomodulatory peptide, which comprises a Class I HiA-B alpha-i domain sequence. It can be used in a pharmaceutical composition together with a subtherapeutic dose of an immunosuppressant, to extend the period of acceptance of a transplant from a major histocompatibility complex (MHC) unmatched donor, i.e. to inhibit transplant rejection. It can also be used in
                                                                                                                                                                                                                                                                                                                                                           ;

HLA-B2702 CTL modulating peptide (B2702.84-75/75-84(T)).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 15; Page 36; 80pp; English. R83061-R83095, R83090-R83095, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          23-APR-1997; U06705.

NOVEL immunomodulatory peptide-type compound - useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 10; Page 36; 41pp; English.

The present sequence is an immunomodulatory peptide, which comprises a Class I HiA-B alpha-1 domain sequence. It can be used in a pharmaceutical composition together with a subtherapeutic dose of an immunosuppressant, to extend the period of acceptance of a transplant from a major histocompatibility complex (MHC) unmatched donor, i.e. to inhibit transplant rejection. It can also be used in the treatment of autoimmune diseases.

Peptides using the D-form anino acids are more effective immunomodulators than their diastereomers or enantiomers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Extension of acceptance period of transplants from MHC unmatched donor hosts – using Class I B75-84 MHC antigen of the recipient

                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                         The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             16-MAY-1996 (first entry)
HLA-B2702 CTL modulating peptide (B2702.84-75/84-75).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 15; Page 36; 80pp; English.

R83061-R83085, R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is a dinmer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to abunish compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CLEs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16-MAY-1996 (first entry)
HLA-B2702 CTL modulating peptide (B2702.84-75/75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy;
is an inverted dimer of residues 75-84 of the alpha-1 domain of the cla
I MHC HLA-B2702. These sequences can be used to extend the period of
acceptance by a recipient of a transplant from an MHC unmatched donor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Extension of acceptance period of transplants from MHC unmatched donor hosts - using Class I B75-84 MHC antigen of the recipient

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administration for unrent treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12-NOV-1996 (first entry)

This sequence represents a specifically claimed immunomodulating diversity accommended a specifically claimed which has immunomodulating activity, including the N-terminal addressents a specifically claimed which has immunomodulating activity, including the N-terminal activity, where the period or esterified forms of up to 60 amno acids, where the pertide-type compound comprises the formula A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or N; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a rycophobic or small amino acid; aa82 = R or L; aa83 = G or R; and a represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HiLAB compounds comprise amino acid sequences related to a class I HiLAB compounds comprise amino acid sequences related to a class I HiLAB compounds comprise amino acid sequences related to a class I HiLAB compounds comprise amino acid sequences related to a class I HiLAB composites (CTL) from undesirably attacking cells in a host or in proteins of interest to activate CTLs. They can also inhibit the proteins of interest to activate CTLs. They can also inhibit the proteins of interest to activate CTLs. They can also inhibit the class of the products of the response to anti-CD3. The peptide can be consequently activated the compound of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.
                   Immunomodulating dimer peptide #2.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                  New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases
                                                                                                                                                                                                       24-MAY-1996; US-653294.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              With a compound of the peptide (s) - based on a class I HiA-B alpha-1 domain, used for preventing rejection of transplants or treating autofimmune diseases a transplants or treating autofimmune diseases as the invention. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 anino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-771) (aa79-84) or (aa84-7) (laa37-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and as represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HiA-B aphal domain (positions 79-84). They can be used to inhibit cytocoxic alphal domain also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the products of interest to activate CTLs. They can also inhibit the used for preventing rejection of Transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.
                                                                                                                                                                                      ö
Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCs), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.

New immunomodulating dimer peptide(s) - based on a class I HLA-B
alpha-1 domain, used for preventing rejection of transplants or
treating autoimmune diseases
Example 1; Page 19, 41pp; English.
Peptides W33784-98 and W337789 were assayed for their immunomodulating
activity. A peptide-type compound or variant is claimed which has
                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                      19-JUN-1998 (first entry)
Peptide B3702.84-75/75-84T tested for immunomodulating activity.
Immunomodulating dimer. Immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                          ö

immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the perpute-type compound comprises the formula; A-B, where A, B = (R aa76-771) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HIA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, considerating antiputs and lupus erythematosis. The products can also be accorded to a thirthing and lupus erythematosis. The products can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16-MAY-1996 (first entry)

                                                                                                                                                                                                                                                                                                                            Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702.

These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administration for unrent treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composite. 2012/2012/2012

Eystl3, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the HLA-B2702 84-757/75-84T palindrome. These sequences can be used to isolate the protein p74 from a T-cell lysate. p74 is a T-cell surface membrane protein massociated with T-cell activation in manmalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. p74 is found in a limited number of cell types, but is particularly expressed on B and T cells. p74 can be isolated by lysis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12-NOV-1996 (first entry)

regitles W3374-99 and W3577-99 Were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-771) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = (B, Sor N: aa79 = R or E; aa80 = I or N: aa81, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and a represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antiqenic peptides or proctains of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating auttoimmune diseases, e.g. diabetes, consume the seather authorities and lupus erythematosis. The products can also be consumed to the products can also be
a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of p74 combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolysis activity of T-cells, by combining them with the extracellular portion of p74 and determining the manut of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand. Sequence 20 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases
Example 1; Page 19; 41pp; English.
Peptides W33784-98 and W33778-9 were assayed for their immunomodulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    19-JUN-1998 (first entry) Peptide B2702.84-75T/75-84 tested for immunomodulating activity. Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;

DNA Res. 5, 55-76, 1998
A;Tille: Complete sequence and gene organization of the genome of a hyper-thermophill
A;Reference number: A71000; MUID:98344137
A;Accession: C71113
A;Status: preliminary: nucleic acid sequence not shown; translation not shown
A;Molecule type: DNA
A;Molecule type: DNA
A;Residues: 1-151 <KRW>
A;Cross-references: GB:AP000003; NID:93236130; PID:d1030708; PID:93257082
A;Cross-references: strain OT3
A;Note: this accession replaces an interim accession for a sequence replaced by GenBa

C;Species: Rickettsia prowazekii
C;Date: 21.NOV-1998 #sequence_revision 21-NOV-1998 #text_change 16-Jul-1999
C;Accession: H71731
R;Andersson, S.G.E.; Zomorodipour, A.; Andersson, J.O.; Sicheritz-Ponten, T.; Alsmark
Nature: 364, 133-140, 1998
A;Tile: The genome sequence of Rickettsia prowazekii and the origin of mitochondria.
A;Reference number: A71630; MUID:99039499
                                                                                A; Accession: S61294
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-546 <12A>
A; Cross-references: EMBL: D29672; NID: 9473964; PIDN: BAA06143.1; PID: d1006705; PID: 9473
C; Superfamily: molecular chaperone t-complex-type
C; Keywords: heat shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross-references: GB:AE001767; GB:AE000512; NID:g4981611; PID:g4981616; TIGR:TM1072 A;Experimental source: strain MSB8

-!- FUNCTION: NTRB ACTS AS A SIGNAL TRANSDUCER WHICH RESPONDS TO THE
NITROGEN LEVEL OF CELL AND MODULATES THE ACTIVITY OF NTRC. IN
NITROGEN LIMITATION NTRB ACTIVATES NTRC BY PHOSPHORYLATED AND CONSEQUENTLY
WHILE IN NITROGEN EXCESS NTRC IS DEPHOSPHORYLATED AND CONSEQUENTLY
INACTIVATED BY NTRB.
-!- SIMILARITY: TO OTHER PROKARYOTIC SENSORY TRANSDUCTION HISTIDINE
                                                                                                                                                                                                                                        MIRANDA-RIOS J., SANCHEZ-PESCADOR R., URDEA M., COVARRUBIAS A.A.; "The complete nucleotide sequence of the glnALG operon of Escherichia coli K12.";

"Structural and functional characterization of homo-oligomeric complexes of alpha and beta chaperonin subunits from the typerthermophilic archaeum Thermococcus strain KS-1.";
J. Mol. Biol. 273:635-645(1997).
-!- FUNCTION: MOLECULAR CHARPERONE; BINDS UNFOLDED POLYPEPTIDES IN VITRO, AND HAS A WEAK ATPASE ACTIVITY (BY SIMILARITY).
-!- SUBULT: FORMS AN OLIGOMERIC COMPLEX OF EIGHT-MEMBERED RINGS (BY SIMILARITY).
                                                                                                                                                                              ;

THE A CHAIN IS RESPONSIBLE FOR DNA BREAKAGE AND REJOINING; THE B CHAIN CATALXZES ATP HYDROLYSIS. THE ENZYME FORMS AN A2B2 TETRAMER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NATURE 396:133-140(1998).

-!- FUNCTION: DNA GYRASE NEGATIVELY SUPERCOILS CLOSED CIRCULAR DOUBLE-
STRANDED DNA IN AN ATP-DEPENDENT MANNER AND ALSO CATALYZES THE
INTERCONVENSION OF OTHER TOPOLOGICAL ISOMERS OF DOUBLE-STRANDED
DNA RINGS, INCLUDING CATENANES AND KNOTTED RINGS.
-!- CATALYTIC ACTIVITY: ATP-DEPENDENT BREAKAGE, PASSAGE AND REJOINING
OF DOUBLE-STRANDED DNA.

on oct 29, 1999 this sequence version replaced gi:6065875.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission only a small overlapping clone, as we submit sequences with only a small overlapping clone, as we submit sequences with following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em: EMBLS Sw., SWISSPROT: Tr., TREMBL: Wp., WORMPEP: Information on the WORMPEP databases can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep IMPORTANT: This sequence is not the entire insert of clone 1106M18. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                58
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The true left end of clone 906P16 is at 142237 in this sequence. The true right end of clone dJ1193N1 is at 79367 in this sequence. This sequence has been finished according to sequence map criteria such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Park
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was generated from part of bacterial clone contigs human chromosome 20, constructed by the Sanger Centre Chromosome Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr20 httb://www.sanger.ac.uk/HGP/Chr20 for sanger is from the library RPCI-5 constructed at the Roswell Par Cancer Institute by the group of Pieter de Jong.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (12-JUN-1998) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, Mo 63108, USA

**NOTE: This is a "working draft' sequence. It currently

**Consists of 42 contigs. The true order of the pieces

**is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will
                                                                                                                                                                                            seq_documentation_block:

Contains exon Human DNA sequence from PAC 204E5 on chromosome 12. Contains exon Similar to Wilms' Tumour-related protein OM-like P2X-like receptor, ATP ligand gated ion channel, ESTs, CpG island.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (29-AUG-1997) Chromosome 12 Project Group (http://www.sanger.ac.uk/HGP/Chr12/) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquires: humquery@sanger.ac.uk clone requests: clonerequest@sanger.ac.uk IMPORTANT; This sequence is the entire insert of clone 204E5. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         298941:1 GI:2370071
12; ATP ligand gated ion channel; CpG island; P2X-like receptor;
QM-like; Tumour-related protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryoft, Metazoa; Chordata; Craniata; Vertebrata; Mammalia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   variation
                                                                                                                                                                                                                                                                                                                                                                                                  variation
                                                                                                                            This sequence was generated from part of bacterial clone contigs of human chromosome 12, constructed by the Sanger Centre chromosome 12 mapping group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr12/
This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                The true left end of clone 204E5 is at 1 in this sequence. The true right end of clone 204E5 is at 129969.
with a note of the overlapping clone name. Note that the variations annotated may not be found in the sequence submission corresponding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     586. 3607
